SECURITY SOLUTIONS

A DIVISION OF PERRY PROTECH

Digital C.O.P.S. from PERRY proTECH provides physical security technology that supports the protection of life and property. Our team is comprised of actual law enforcement officials that additionally understand technology infrastructure and sophisticated software. We understand that you require mission-critical network platforms to achieve your goals. Many Systems Integrators focus on network security, but we take that to a whole new level with the eyes of trained law enforcement leading our directives

Secure Technology designed by Cops

Surveillance

Video surveillance is a blend of networking technologies that have made major improvements recently to image processing. This is important to provide necessary detail for legalities if a security breach happens including facial details and license plates. Off-the-shelf cameras and older models most likely cannot provide the business grade performance that you may need.

Monitoring

One of the most important parts of your physical security is a trustworthy monitoring solution. You need a solution that can detect an intrusion, review historical data and respond with the appropriate steps. Your goal is a deterrence of intrusion and if something happens, to minimize the risk, trigger the appropriate response and avoid false alarms with costly fines and miscommunications.

Alarm Systems

We can provide hard-wired alarm solutions, 100% wireless, or a blend of both as you need. Our solutions allow you to access and control your alarm system anytime from your smart phone or any web browser. Our solutions are perfect for business or residential and there are no hidden fees for bundles, activation or installation. And, we'll make sure your system is scalable for the future as you grow and your needs change.

Access Control

Our team can help you control and monitor access to gates, doors and keys across your organization. Our solutions integrate into your existing network infrastructure and avoid the issues of running independently. We can manage complex schedule requirements and individual access points and provide options suited for your unique business needs.

Video Verification

Our solutions monitor, manage and respond in real-time and reduce the risk of human error. Our monitoring services can verify intrusion alarms and identify as genuine, false or a nuisance. Because we are IP experts, our response team is adept at using the proper technology while maintaining cost effectiveness.

Mobile Video

Our Mobile Video solutions provide in-vehicle DVR/camera solutions for safety and security. You can protect your passengers, cargo and drivers while securing any evidence you may need in case of an incident occurring on or with your fleet. Our systems are built tough to withstand today's demanding driving conditions.
