

# Network Connectivity

A Cost-Effective and Scalable Solution for Secure and Private Connection

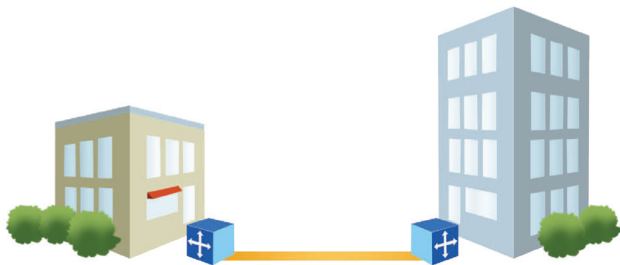

## Dedicated Internet Access

- Dedicated Internet access using Fiber Optic Technology
- Scalable bandwidth from 5 Mbps to 15 Gbps
- Reliable, secure connectivity
- Stringent Service Level Agreements and advanced monitoring tools ensure high performance
- Dedicated local account management team providing a single point of contact

## Metro Ethernet Solutions

- Simplified network architecture that lets you run multiple applications on a single network
- Expands your capabilities with Point to Point, Point to Multipoint, or Multipoint Configurations
- Highly affordable alternative to frame relay, private line, and T1 solutions
- A network infrastructure that extends from metropolitan to outlying areas

## Network Configuration Options

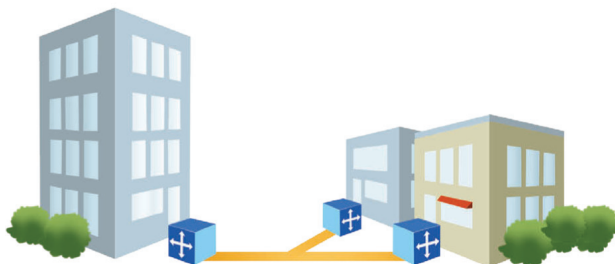

### Ethernet Private Line (EPL): Point-to-Point

Endpoint connectivity directly between two locations

### Ethernet LAN: Multipoint-to-Multipoint

High-capacity connectivity between multiple locations

### Ethernet Virtual Private Line (EVPL): Point-to-Multipoint

Connectivity from a central location to multiple locations
